

## LIGHTS CAMERA ACTION – Lower School (Summer Term 2018)

This project will not only focus on India, the country and its people, learning about the physical geography of the country as well as its position in the world. We will look at the science of lights and shadows and forces. This work will help them to move onto different cinema forms from around the world, including the English film industry and Bollywood.

At the end of this project we will have a 'Taste of India', where children will create an Indian banquet and perform an Indian dance.

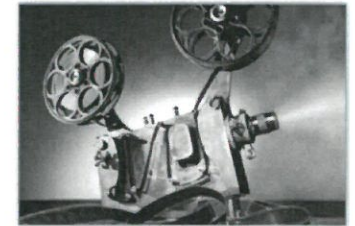

**Science** – In a state, Good vibrations, Switched on.

**History** – The history of film, cameras and the life of Stan Laurel.

## HISTORY OF FILM

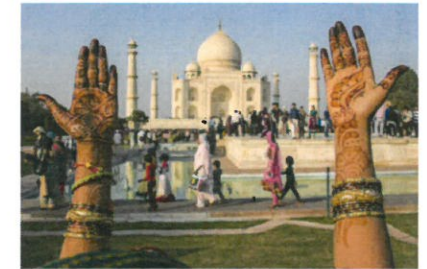

**Geography** – Location of India and its geographical and physical aspects. Including the people and life in India.
